MANUFACTURER'S STATEMENT

Read this operation manual carefully before use to ensure proper operation of the sensor.

Failure to read this operation manual may cause improper sensor operation and may result in serious injury or death of person. The meanings of the symbols are as follows. Please study the following first and then read the contents of this operation manual

/!\ WARNING

Disregard of warning may cause the improper operation causing death or serious injury of

Disregard of caution may cause the improper operation causing injury of person or damage to

/!\ CAUTION

objects. Special attention is required to the section of this symbol.

NOTE

i

It is required to check the operation manual if this symbol is shown on the product.

NOTE

- 1. This sensor is a non-contact switch intended for header mount / built-in / wall mount of an automatic door. Do not use for any other applications. This sensor cannot be used for industrial doors or shutters when used, proper operation and safety cannot be guaranteed.
- 2. When setting the sensor's detection area, make sure there is no traffic around the installation site.
- 3. Before turning the power ON, check the wiring to prevent damage or malfunction of equipments that are connected to the sensor.
- 4. Only use the sensor as specified in the operation manual provided.
- 5. Be sure to install the sensor in accordance with the local laws and standards of the country in which the sensor is
- 6. Before leaving the job site make sure that the sensor is operating properly and instruct the building owner/operator on proper operation of the door and the sensor.
- 7.The sensor settings can only be changed by an installer or service engineer. When changed, the changed settings and dates shall be registered in the maintenance logbook accompanying the door.

<u>∕</u> !\ WARNING	
Danger of electric shock.	

Do not wash, disassemble, rebuild or repair the sensor, otherwise it may cause electric shock or breakdown of equipments.

SPECIFICATIONS

: PASAT3 - PASAT3I Model Cover color Black (PASAT3 only)

2.0 to 3.0m (6'7" to 9'10") Mounting height : See ADJUSTMENTS Detection area Detection method : Active Infrared Reflection

Depth angle adjustment : -5 to 5°

12 to 24VAC (±10%) Power supply 12 to 30VDC (±10%)

Power consumption : <3VA Operation LED Green / Stand-by

Red / Detection active

Safety / Test output Opto coupler (NPN) Voltage / 5 to 50VDC

Current / 100mA Max. (Resistance load)

Test input

Opto coupler Voltage / 5 to 30VDC Approx. 0.5sec. Output hold time

: <0.3sec. Response time

Operating temperature : -20 to +55°C (-4 to 131°F) Operating humidity <80%

IP44 (PASAT3) / IP4X (PASAT3I) IP rate

2 (ISÒ13849-2) Category 260g / 9.2oz (PASAT3) Weight 175g / 602oz (PASAT3I) Accessories

1 Cable 3m(9'10") (6 × 0.14mm² AWG26 / Overcurrent protection with less than 2A

1 Operation manual

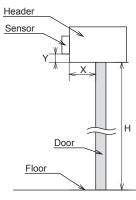

2 Mounting screws (PASAT3 only) 1 Mounting template (PASAT3 only)

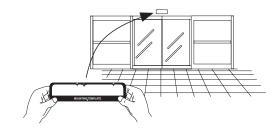

NOTE

*When using this sensor, the sensor has to be connected to a door system which has the SELV circuit. The specifications herein are subject to change without prior notice due to improvements

PASAT3

- 1. Affix the mounting template at the desired mounting position.
- 2. Drill two mounting holes of ø3.4mm (ø1/8").
- 3. To pass the cable through the header, drill a wiring hole of ø8mm (ø5/16").
- 4. Remove the mounting template.

- H: Height from the floor to the bottom of the header
- Y: Distance between the bottom of header and the sensor
- X: Distance between the door and the mounting surface

Maximum mounting distance (Y)

[mm(feet,inch)]

X	2,000 (6' 6")	2,200 (7' 2")	2,500 (8' 2")	2,930 (9' 9")
0	No limit			
50 (1 15/16")	45 (1 3/4")	50 (1 15/16")	55 (2 3/16")	70 (2 3/4")
100 (3 15/16")	35 (1 3/8")	40 (1 9/16")	45 (1 3/4")	55 (2 3/16")
150 (5 7/8")	25 (1")	30 (1 3/16")	35 (1 3/8")	40 (1 9/16")
200 (7 7/8")	15 (9/16")	20 (13/16")	25 (1")	35 (1 3/8")
250 (9 13/16")	-	15 (9/16")	20 (13/16")	25 (1")
300 (11 13/16")	-	-	-	15 (9/16")

5. Remove the housing cover by placing the fingers on the notches as shown below. Attach the sensor to the mounting surface with two mounting screws.

Make sure to affix the mounting template as described in the above chart , otherwise it can be dangerous since there may be no detection area around
the threshold. Install the sensor as low as possible on the header.

NOTE The sensor mounting position may be limited depending on the header thickness and the mounting height. To comply with DIN18650, ensure that the sensor is installed within the values in the above chart and that the mounting height does not exceed 3,000mm (9'10") .

OUTER DIMENTIONS AND PART NAMES

PASAT3: Header mount PASAT3I: Built-in 245(9 5/8") 125(4 15/16") 220(8 11/16") 35(1 3/8" 200(7 7/8") 43(1 11/16") 38(1 1/2") 36(1 7/16") 64(2) 7/8") 1/8 47(1 57(2 [mm (inch)] Bei offener Einstellungsabdeckung <u> АНВАВА́НВАВ</u> (7) (8) (9) (10) (1) Connector (7) DIPswitches (2) Mounting holes for PASAT3 (8) Depth angle adjustment (3) Setting cover (9) Depth angle adjustment screw

INSTALLATION

The following conditions are not suitable for the sensor installation

-Fog or exhaust emission around the door

(4) Setting cover screw

(5) Operation LED (6) Detection window

-Wet floor

-Vibrating header or mounting surface

-Moving objects or a heating radiator in the detection area.

-Highly reflecting floor or highly reflecting objects around the door.

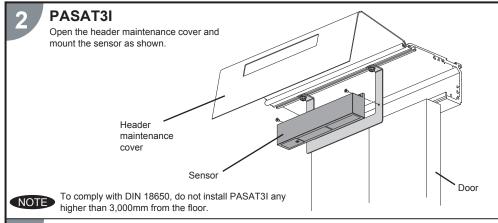

(10) Function key

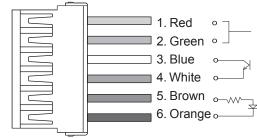

(11) Mounting holes for PASAT3I

PASAT3 & PASAT3I Wire the cable to the door controller as shown below

To connector of 1. Red the sensor 2. Green 3. Blue 4. White

Power supply 12 to 24VAC ±10% 12 to 30VDC ±10% Safety / Test output Opto coupler (NPN) Voltage: 5 to 50VDC Current: 100mA Max. Iceo: 600nA Max. (Resistance load) Test input Opto coupler Voltage: 5 to 30VDC

To the control panel

/!\ WARNING Danger of electric shock. Before starting the procedure, ensure that the power is turned OFF. When passing the cable through the hole, do not tear the shield, otherwise it may cause electric shock or breakdown of the sensor.

PASAT3 & PASAT3I

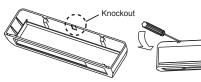

- 1.Plug the connector of the sensor
- 2. Open the setting cover. 3. Supply power to the sensor. Adjust the detection area and set the dipswitches. (See ADJUSTMENTS)
- 4. Close the setting cover. Make sure to connect the cable correctly to the door controller before turning the power ON.

To enable the presence detection, do not enter the detection area for 10 seconds after supplying the power. Do not touch the dipswitches before turning the power ON, otherwise an error occurs. When changing the settings of dipswitches, check ADJUSTMENTS 3 Dipswitch settings.

Place the housing cover

If wiring is to be exposed, break the knockout.

Do not use the sensor without the cover WARNING When using the cable knockout, install the sensor indoors or use the rain-cover (Separately available) otherwise electric shock or breakdown of Danger of electric shock the sensor may occur

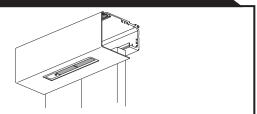

To remove the housing cover of the sensor installed on the header, place a screw driver in the two notches on the upper part of the sensor

INSTALLATION

PASAT3I

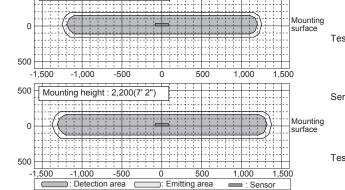

Close the header maintenance cover

Mounting height : 2,000(6' 6")

ADJUSTMENT

Detection area according to the test conditions required by DIN18650.

Test conditions required by DIN18650 Floor: Grey (Kodak Grey card) Detection object : DIN 18650 Test body (Mat black)

Sensor setting Area angle: 0°

[mm(feet,inch)]

Sensitivity: "Middle" Area width: 8 Spots

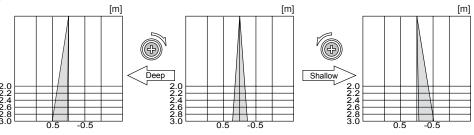

Test conditions

Speed of detection object : 50mm / sec

NOTE The actual detection area may become smaller depending on the ambient light, the color / material of the object or the floor as well as the entry speed of the object. The sensor may not be activated when the entering speed of the object or a person is slower than

Area depth angle adjustment

50mm / sec. or faster than 1.500mm / sec.

The detection area can be adjusted up to 5° away from the door (Deep) or 5° towards the door (Shallow) Adjust the required detection area by turning the depth adjustment screw wth a screw driver. Check the detection area position with Red LED of the Operation LED using a tool such as a reflecting mirror For the compliance with DIN18650, the required fine adjustments applying the DIN18650 test conditions are recommended.

NOTE Make sure the detection area does not overlap with the door / header, otherwise ghosting / signal saturation

Do not place any highly reflecting objects in the detection area, otherwise signal saturation may occur.

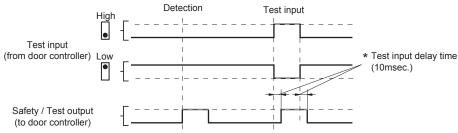

3-5. Setting the test input

Set dipswitch 10 according to the test input from the door controller

< Test input and Safety / Test output timing chart >

*The test input delay time is the time period between the test input and safety / test output.

CHECKING

Check the operation according to the chart below.

	Power OFF	Outside of detection area	Entry into detection area	Outside of detection area
Entry		*		
Status	-	Stand-by	Motion/Presence detection active	Stand-by
Operation LED	· None (-irean		Red	Green
Output			OFF	ON

INFORM BUILDING OWNER / OPERATOR OF THE FOLLOWING ITEMS

∕!\ WARNING

- 1. Always keep the detection window clean. If dirty, wipe the window lightly with a damp cloth. (Do not use any cleaner or solvent.)
- 2. Do not wash the sensor with water.
- 3. Do not disassemble, rebuild or repair the sensor yourself, otherwise electric shock may occur.
- 4. When an operation LED blinks green, contact your installer or service engineer
- 5. Always contact your installer or service engineer when changing the settings. 6. Do not paint the detection window.

1. When turning the power ON, always walk-test the detection area to ensure proper operation.

2. Do not place any objects that move or emit light in the detection area. (e.g. Plant, illumination, etc.)

Dipswitch settings

Follow these steps to change the settings of dipswitches.

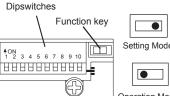

1. Change the function key from "Operation Mode" to "Setting Mode"

2. Change the dipswitches setting.

3. Change the function key back to "Operation Mode"

NOTE When the above procedures (1-3) are not followed, an error (Red & Green blinking) occurs.

Make sure to use the sensor only in "Operation Mode"

Operation Mod

The sensor does not operate properly in "Setting Mode".

Normally set to "Middle". "Low" decreases the sensitivity and "High / S-High" increases the sensitivity. Refer to the chart below for the suitable sensitivity to each installation environment.

N	Middle	High	S-H
2	1 2	1 2	1

	ļ	Mounting height [mm (feet,inch)]				
		2,000 (6' 6")	2,200 (7' 2")	2,500 (8' 2")	3,000 (9' 10")	For example
Floor condition	Low reflection	Middle	Middle	High	S-High	-Carpet -Dark color floor
	Middle reflection	Low	Middle	Middle	S-High	-Concrete
	High reflection	Low	Low	Middle	High	-Tile -Marble

3-1. Setting the sensitivity

Special attention to the setting is required when the door is used often by the elderly or children. Please adjust the sensitivity and presence detection timer according to your risk assessment.

3-2. Setting the presence detection timer

The presence detection timer can be selected from 4 settings. To comply with DIN18650, set the timer "60sec." or longer.

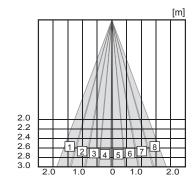

To enable the presence detection, do not enter the detection area for 10 seconds after setting the timer.

15sec. 60sec. 180sec.

3 4

3-3. Setting the area width

The left and right width can be adjusted by combining dipswitches 5,6,7 and 8. Referring to the chart below, select dipswitches 5 and 6 for the left and dipswitches 7 and 8 for the right area width adjustment

Left area width adjustment Dipswitches 5 6 1 1 2 1 2 3 Area No spots Eliminated Eliminated Eliminated eliminated spots Right area width adjustment

Dipswitches 8 7 8 6 7 8 Area No spots spots eliminated

The actual detection area may become smaller depending on the ambient light, the color / material of the object or the floor as well as the entry speed of the object.

The sensor may not be activated when the entering speed of an object or a person is slower than 50mm / sec. or faster than 1,500mm / sec.

3-4. Setting the frequency

When using more than two sensors close to each other, set the different frequency for each sensor
